As we all know the world is moving towards convergence of Information Technology and Telecommunication. WAP or Wireless Aplication Protocol is an important technology in this convergence domain.

This technology extends the accessibility of Internet to mobile users through communication devices like cellular phones.

Starting from the very basics this book offers a comprehensive overview of rhw subject-- covering not only the theoretical foundation but also WAP`s usage in real life.

It provides a thorough, indepth and complete coverage of Wireless Markup Language (WML) and Wireless Markup Language Script (WMLScript) which are used for programming in the WAP environment.

The numerous demonstrative examples provided throughout the book are a key aide in understanding the underlying concept.

When a reader goes through the book he will be well equipped to understand and develop commercial WAP applications on his own.

About Unicorn Books

Unicorn Books publishes an extensive range of books that are both affordable and high-quality.
